

Dani Rojas-Jimenez

Brooklyn, NY, 11231 | (860) 849-5728 | dani.rojasjimenez2@baruchmail.cuny.edu | [linkedin.com/in/dani-rojas-jimenez-900bb120a](https://www.linkedin.com/in/dani-rojas-jimenez-900bb120a)

EDUCATION

Baruch College

New York, NY

Bachelor of Arts in Actuarial Science

June 2025

GPA: 3.6

Relevant Coursework: Mathematics for Inferential Statistics, Short-Term Insurance Math, Mathematics of Data Analysis, Algorithms/Comp. Programing, Actuarial Mathematics I

ACTUARIAL EXAMS

Probability (P)

Passed-Sep. 2024

Financial Mathematics (FM)

Passed-Apr. 2025

RELEVANT WORK EXPERIENCE

NYC Police Pension Fund

New York, NY

Intern

Jul. 2024-Present

- Determine the expected cost of purchasing service time that police officers accrued during previous public employment
- Establish monthly deduction plans tailored to help police officers pay for their accrued service time buyback
- Explain the details of pension statements, enhancing police officers understanding of retirement savings and planning

OTHER WORK EXPERIENCE

Kingsborough Community College

Brooklyn, NY

Math Tutor

Oct. 2022-Aug. 2024

- Formed study groups of 5 students to explain mathematical topics like Differential Calculus
- Advised students on how to get the best of any mathematics study section

RELEVANT PROJECT EXPERIENCE

CUNY Research Scholar Program

Sep. 2022-Jun. 2023

- Worked with NumPy and Math Libraries to recreate the Euler's Method
- Tested how precisely a machine learning algorithm could solve differential equations through Python Euler's method code

DataCamp (Excel Bananas' sales Project)

Apr. 2025-May 2025

- Worked with PivotTable to summarize sales data through functions like Grouping, Calculated Fields, and slicing
- Visualize different market strategies through What-if Analysis Excel functions like Goal Seek, Data Table, and Scenario Manager
- Produce forecasts of Banana's sales using data entries from previous years and Trendlines like exponential, linear, and polynomial in Excel ForeCast Sheet function

SQLZOO.NET (COVID-19)

May 2025-May 2025

- Adjust the main table to present COVID-19 statistics for one selected country within a defined period
- Leverage SQL window functions like LAG to determine daily death figures and pinpoint the deadliest day per country
- Leverage self-joins to calculate each country's inflation rate during a defined time interval

SKILLS

- Microsoft Excel (Skill gained through college classes, NYC Police Pension Fund duties, and DataCamp)
- SQL (Skill gained through DataCamp, SQLZOO.NET exercises, and Actuarial Workshop at Baruch College)
- Python (Skill gained through research activities at CUNY Research Scholar Program and College classes at Baruch College)
